The listing of claims will replace all prior versions, and listings, of claims

in the application:

Listing of Claims:

(Currently Amended) A digital/analog broadcasting receiver comprising: 1.

a receiver for receiving an encoded digital/analog broadcasting signal

originated from a broadcasting station;

a digital/analog decoder for decoding the digital/analog broadcasting signal

received from the receiver and then outputting the signal to a display which

displays an image;

a memory for storing channel information contained in the broadcasting

signal decoded by the digital decoder;

a control unit for controlling each of the other sections of the receiver; and

an input device for a user to input an operation instruction to the control

unit, wherein the control unit has a function to set and select an operation mode

of the receiver for each user based on inputs by a plurality of users who use the

input device, ; characterized in that,

wherein the input device has a numeral inputting key for inputting a

numeral when the operation mode is selected; and

wherein the control unit assigns a predetermined selection number input

by the user to the set operation mode and stores the selection number and the

operation mode in correlation with each other in the memory, and also,

wherein when the user has operated the numeral inputting key to enter the selection number and the numeral inputting key does not coincide with a channel number stored in the memory, the control unit refers to the memory to select the operation mode that corresponds to the selection number thus entered.

2. (Original) A digital/analog broadcasting receiver comprising: a receiver for receiving an encoded digital/analog broadcasting signal originated from a broadcasting station; a digital/analog decoder for decoding the digital/analog broadcasting signal received from the receiver and then outputting the signal to a display which displays an image; a memory for storing channel information contained in the broadcasting signal decoded by the digital decoder; a control unit for controlling each of the other sections of the receiver; and an input device for a user to input an operation instruction to the control unit, wherein the control unit has a function to set and select an operation mode of the receiver for each user based on inputs by a plurality of users who use the input device; characterized in that,

the input device has an operation key which is assigned a specific operation instruction and direction keys comprised of UP/DOWN keys and RIGHT/LEFT keys each of which is assigned the operation mode for each user; and

the control unit assigns any one of the direction keys input by the user to

the set operation mode and stores the direction key and the operation mode in

correlation with each other in the memory and also, when the user presses both

the operation key and any one of the direction keys, refers to the memory to

select the operation mode that corresponds to the direction key thus pressed by

the user.

3. (Original) A digital/analog broadcasting receiver comprising: a receiver for

receiving an encoded digital/analog broadcasting signal originated from a

broadcasting station; a digital/analog decoder for decoding the digital/analog

broadcasting signal received from the receiver and then outputting the signal to

a display which displays an image; a memory for storing channel information

contained in the broadcasting signal decoded by the digital decoder; a control

unit for controlling each of the other sections of the receiver; and an input device

for a user to input an operation instruction to the control unit, wherein the

control unit has a function to set and select an operation mode of the receiver for

each user based on inputs by a plurality of users who use the input device;

characterized in that,

the input device has a numeral inputting key for inputting a numeral

when the operation mode is selected; and

the control unit assigns a predetermined selection number input by the

user to the set operation mode and stores the selection number and the operation

mode in correlation with each other in the memory and also, when the user

operates the numeral inputting key to hold the numeral key corresponding to the

selection number pressed for at least a predetermined time, refers to the memory

to select the operation mode that corresponds to the selection number thus

entered.

4. (Original) The digital/analog broadcasting receiver according to claim 1,

further comprising an on-screen display (OSD) for displaying the channel

information on the display connected to the receiver, wherein the operation mode

is adapted to set a font type, size, and display color of the channel information

displayed on the OSD display and a background display color individually for

each user.

5. (Original) A broadcasting receiver comprising: a memory for storing an

operation mode of the receiver; a control unit for controlling each of the other

sections of the receiver; and an input device for a user to input an operation

instruction to the control unit, wherein the control unit has a function to set and

select the operation mode of the receiver for each user based on inputs by a

plurality of users who use the input device; characterized in that,

the input device has a numeral inputting key for inputting a numeral

when the operation mode is selected; and

the control unit assigns a predetermined input pattern by use of the

numeral inputting key to the operation mode and stores the operation mode in

Attorney Docket No. 010482.50912

correlation with the input pattern in the memory and, when the user operates

the numeral inputting key in the input pattern, refers to the memory to select

the operation mode that corresponds to the input pattern.

6. (Original) A broadcasting receiver comprising: a memory for storing an

operation mode of the receiver; a control unit for controlling each of the other

sections of the receiver; and an input device for a user to input an operation

instruction to the control unit, wherein the control unit has a function to set and

select the operation mode of the receiver for each user based on inputs by a

plurality of users who use the input device; characterized in that,

the input device has a predetermined operation key which is assigned a

specific operation instruction and direction keys comprised of UP/DOWN keys

and RIGHT/LEFT keys each of which is assigned the operation mode for each

user; and

the control unit assigns any one of the direction keys to the operation

mode and stores the operation mode in correlation with the direction key in the

memory and, when the user presses the operation key and also any one of the

direction keys, refers to the memory to select the operation mode that

corresponds to the direction key thus pressed.

7. (New) The digital/analog broadcasting receiver according to claim 1,

wherein when the numeral inputting key coincides with a channel number

Page 6 of 15

Attorney Docket No. 010482.50912

stored in the memory, the control unit causes a tuner to receive a channel

corresponding to the channel number is selected.

8. (New) The digital/analog broadcasting receiver according to claim 1,

wherein when the control unit selects the operation mode when a broadcasting

image is output to the display, the user has operated the numeral inputting key

to enter the selection number and the numeral inputting key does not coincide

with a channel number stored in the memory.

9. (New) The digital/analog broadcasting receiver according to claim 2,

further comprising an on-screen display (OSD) for displaying the channel

information on the display connected to the receiver, wherein the operation mode

is adapted to set a font type, size, and display color of the channel information

displayed on the OSD display and a background display color individually for

each user.

10. (New) The digital/analog broadcasting receiver according to claim 3,

further comprising an on-screen display (OSD) for displaying the channel

information on the display connected to the receiver, wherein the operation mode

is adapted to set a font type, size, and display color of the channel information

displayed on the OSD display and a background display color individually for

each user.

Attorney Docket No. 010482.50912

11. (New) The digital/analog broadcasting receiver according to claim 3,

wherein the numeral key is pressed for less than the predetermined amount of

time, the control unit causes a tuner to receive a channel corresponding to the

pressed numeral key.

12. (New) The broadcasting receiver according to claim 5, further

comprising an on-screen display (OSD) for displaying the channel information on

the display connected to the receiver, wherein the operation mode is adapted to

set a font type, size, and display color of the channel information displayed on

the OSD display and a background display color individually for each user.

13. (New) The broadcasting receiver according to claim 5, wherein the

predetermined input pattern does not coincide with a channel number stored in

the memory.
